

Jordan Christley

Full-Stack AI Engineer & Independent Consultant

christleyjordan@protonmail.com | 832-875-6634 | github.com/JordanTreDaniel | jordanchristley.com

SUMMARY

AI-native full-stack engineer building production systems that combine LLM orchestration, autonomous agent design, and Cloudflare-native infrastructure into end-to-end business tools. Specializes in RAG pipelines, multi-agent workflow orchestration, and browser automation. Currently running an independent consulting operation delivering AI-powered solutions across real estate tech, CRM, and business automation.

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, Rust, JavaScript, SQL
- **Frontend:** React, Next.js, Redux, Tailwind CSS, Playwright
- **Backend:** Node.js, NestJS, Express, FastAPI, Python APIs
- **AI / ML:** RAG Pipelines, LLM Orchestration (Claude, OpenAI), Vector Databases, Embeddings, AI Agent Design, Prompt Engineering
- **Infrastructure:** Cloudflare Workers / D1 / R2 / KV, AWS (Lambda, S3, RDS, CloudFormation), Docker, Kubernetes, Terraform, GCP
- **Databases:** PostgreSQL, SQLite / D1, Redis, Supabase, MongoDB
- **Automation:** Playwright, Puppeteer, FFmpeg, Email Automation (Gmail/IMAP), Notion API
- **Domains:** Real Estate Tech, CRM, SaaS, Billing / Stripe, Meeting Transcription & Task Extraction

EXPERIENCE

Emerald Technology

2022 — Present

Independent Consultant — Houston, TX

- Architect and deploy AI-native business automation systems combining LLM orchestration, web scraping, email pipelines, and payment processing
- Build autonomous agent infrastructure on GCP with multi-tool orchestration, browser automation, and wave-based sub-agent dispatch
- Develop production real estate tech: deal pipelines with AI-powered candidate scoring, automated email ingestion, investor matching, and skip-tracing
- Implement end-to-end meeting-to-task pipelines — transcription, AI extraction, Notion CRM ingestion, and adversarial review workflows
- Design Cloudflare-native infrastructure (Workers, D1, R2, KV) with Terraform infrastructure-as-code
- Build Stripe-integrated invoicing, billing, and subscription management systems
- Create AI-generated websites with scroll-driven 3D, video generation, and social media integration

Booster

May 2022 — 2023

Software Engineer — South Houston, TX (Remote)

- Built and maintained fundraising platform web applications using Node.js, NestJS, React, and Redux
- Improved conversion rates and queue job execution times across the platform
- Integrated LLMs with vector storage for intelligent features
- Worked with SQL databases, SSH, AWS, and Docker in production environments

Bayer Crop Science

Dec 2020 — 2022

Full Stack Developer — Houston, TX

- Full stack development on digital agriculture tools using React, Node.js, and AWS
- Managed React applications with Material UI, Recoil, and Redux on the frontend
- Built and maintained Node.js APIs with PostgreSQL databases

- Deployed and managed AWS resources including CloudFormation, S3, and RDS
- Participated in hackathons, contributing ideas and prototypes

EOG Resources

Apr 2019 — Oct 2020

Frontend Developer — Houston, TX

- Built and maintained key React web applications for a 1,000+ employee oil & gas company
- Designed and implemented UI components with React and Material UI
- Led development of automated testing bots using Node.js, Python Flask, and Puppeteer — saving hundreds of hours of manual QA
- Reviewed and created hundreds of pull requests in a collaborative development process
- Mentored junior developers on best practices and code quality

Flatiron School

Aug 2018 — Oct 2020

Technical Coach — Houston, TX

- Taught coding fundamentals and web technologies (JavaScript, Ruby, Python, React, Redux, Rails) to career-changing students
- Coached students through complex learning challenges, breaking down abstract concepts into clear explanations
- Adapted teaching approaches based on individual learning patterns and emotional cues

KEY PROJECTS

Resource Realty / 500 Deals

Real estate deal pipeline with AI-powered candidate scoring, email ingestion, investor matching, and automated deal verification. Cloudflare Workers + D1.

Hermes Agent

Autonomous agent VM on GCP with SSH access, multi-tool orchestration, and wave-based sub-agent dispatch patterns.

Review Dashboard

Meeting-to-tasks pipeline with adversarial review and envelope system. Transcription → AI extraction → Notion ingestion → human review → automated actions.

Meeting-to-Tasks

End-to-end pipeline: audio transcription → context-tagging → task extraction → master JSON draft → review gate → batch Notion creation.

Outreach Automation

Apollo scraping, Gmail draft creation, and investor/recruiter outreach pipeline with automated contact research.

EDUCATION

Coder Camps

2016 — 2017

MEAN Stack Certification

Houston Community College

2014 — 2016

Associate in Computer Science

CERTIFICATIONS

- **Learning How to Learn** — Coursera
